About Me

Frontend Developer with over 2 years of experience building production web applications using React, TypeScript, and TailwindCSS. Skilled in developing maintainable, type-safe frontend systems, translating product requirements into scalable user interfaces, and collaborating across engineering teams to deliver production-ready features. Currently expanding my backend development skills while incorporating AI-assisted workflows into my development process.

Technical Skills

- **Programming Languages:** JavaScript, TypeScript.
- **Frameworks & Libraries:** React, Redux Toolkit, RTK Query, Zustand, TanStack Query, Server-Sent Events (SSE), Node.js, Express.js.
- **Styling & UI Libraries:** TailwindCSS, Material UI, ShadCn, Headless UI, Shopify Polaris.
- **Integrations:** Google OAuth, Shopify, JWT, Firebase.
- **Database:** MongoDB, MySQL, PostgreSQL.
- **Tools:** BiomeJs, Zod, Vite.
- **Version Control:** Git, GitHub (branching, PR workflow, conflict resolution, cherry-picking, squash-merging)
- **AI Development Tools:** OpenCode, ClaudeCode, Minimax M3, MCP

Professional Experience

ZVENTURES LLC

Frontend Developer

May 2024 – Present

Worked across three production SaaS products within a shared monorepo ecosystem

Linkboss Client App (React, ShadCn, Zustand, TanStack)

- Refactored and organized frontend application architecture by separating API, query, component, and validation layers while enforcing end-to-end type safety with Zod, resulting in a **reduction of more than 2,000 lines of code**.
- Reviewed **pull requests**, **provided code quality feedback**, and collaborated on code quality improvements before production releases.
- Reduced perceived data-loading latency **to near-zero** by implementing TanStack Query's prefetching strategy for the Link Metrics feature.
- **Mentored a frontend intern** by reviewing implementations, providing technical guidance, and helping unblock development tasks.
- Reduced repetitive user actions by implementing one-click duplicate cleanup, fuzzy filtering, CSV export, and validation-driven workflows for enhanced bulk tool data management.

Linkboss Admin App (React, MUI, Redux, Shiki)

- Modernized legacy data fetching architecture by migrating Redux Thunks to RTK Query by refactoring more than **600 lines of code**, improving consistency of caching, loading states, and error handling.
- Collaborated with backend engineers throughout feature planning, API design for alignment with frontend, debugging, and production releases.

- Developed operational dashboards that visualized subscription growth, user engagement, tool usage, and platform health insights, enabling internal teams to monitor business performance.
- Contributed to building data-intensive interfaces supporting server-side pagination, polling, fuzzy search, filtering, expandable tables, and accessible interactions for large production datasets.
- Eliminated recurring developer intervention and manual database queries by building admin-controlled configuration systems for languages, prompts, pricing, and package management.

Linkboss Shopify App (React, Shopify Polaris)

- Developed a Shopify embedded application using Polaris that enabled merchants to monitor SEO health (such as inbound, dead-end pages), synchronization of Shopify pages, products, and articles.

GoGoshop E-commerce Platform

Frontend Developer (Contractual)

Delivered December 2023

- Reduced page load time by **more than 20%** through React Suspense-based code splitting and structured state patterns. Organized the codebase following MVC architecture.
- Re-architected a legacy PHP-based website into a performant MERN stack solution, utilizing Node.js and Express for API layers.
- Developed secure authentication using JWT and designed well-structured, reusable MongoDB schemas for maintainable data modeling.

Projects

Foodie-RMS – Multi-vendor restaurant management platform

[Live Link](#)

React, NodeJs, ExpressJs, MongoDB, Mongoose, TailwindCSS, NextUI (currently HeroUI)

- Centralized restaurant administration, order processing, inventory tracking, branches, staff management, expenses, and subscription workflows within a single web application.
- Contributed to building reusable dashboard architecture with role-based access, Firebase authentication, Stripe payment integration, media uploads, and reporting.

Education

BSc in Computer Science and Engineering (CSE)

R.P. Shaha University | January 2020 – March 2024

Activities

- **Participated in the ICPC Regional Contest 2022.**
- **Intra-Department Programming Competition (Spring 2022):** Ranked 2nd among 22 teams.
- **RPSU Coding Competition:** Ranked 8th among 35 contestants.
- **North South University Coding Bootcamp:** Problem Solving Program Contestant.

Courses and Certifications

The Hard Parts of Functional JavaScript by Will Sentence | Frontend Masters

Completed on March 19, 2026

- Gained a deeper understanding of JavaScript internals, including closures, function composition, higher-order functions, immutability, and function decoration. Also helped strengthen my knowledge of JavaScript execution flow to debug complex code logic.
