Career Objective

Frontend Developer with 2+ years of experience building web applications using JavaScript, TypeScript, React, Node.js, Express.js, and REST APIs. Built and maintained features for LinkBoss, an AI-powered SEO interlinking platform serving 8,000+ users and supporting 50-150 concurrent users. Strong foundation in JavaScript, with hands-on experience in frontend development, asynchronous programming, error handling, and backend contributions. Skilled in writing maintainable code, integrating third-party services, debugging production issues, and collaborating through code reviews.

Skills & Competencies

- JavaScript (ES6+)
- TypeScript
- HTML5
- CSS3
- Tailwind CSS
- React
- Axios
- TanStack Query
- Zustand
- Redux Toolkit
- React Hook Form
- JWT
- Firebase
- RTK Query
- Server-Sent Events
- Express.js
- Node.js
- Zod
- Recharts
- ApexChart

Styling & UI Libraries: Material UI, shadcn/ui, Headless UI, Shopify Polaris, Hero UI, Daisy UI.
Tools & Databases: Biome, Vite, Git, GitHub, MySQL, PostgreSQL

Professional Experience

Zventures LLC | **LinkBoss** Full-Time | May 2024 – Present
Frontend Developer

- Refactored the client application codebase data layer by decoupling API, query, and Zod schema validation layers, implementing TanStack Query prefetching and targeted cache invalidation to cut perceived data loading time by up to 40% across 8,000+ users.
- Built a Google Search Console-enabled SEO analytics dashboard that handles up to 100,000 URLs per domain without freezing the UI. Loaded data with parallel, paginated requests; streamed live sync updates over SSE; and used TanStack Virtual to keep large keyword cannibalization and duplicate-link lists scrolling smoothly.
- Eliminated bottlenecks in the Anchor Manager by replacing a monolithic database fetch with a sequential useInfiniteQuery pipeline featuring exponential backoff retries, enabling progressive background loading and instant client-side search across already-fetched chunks.
- Built an internal administration portal using React, Redux Toolkit, Material UI, and ApexCharts to manage platform-wide telemetry (revenue, tools usage, sign-up), subscription packages, custom payment link generation, and user account moderation.
- Mentored an intern on code review and debugging, introducing Zod schemas for API response and environment variable validation to catch data and config errors before they reached users.

GoGoshop E-commerce Platform

Frontend Developer Contractual | June - December 2023

- Migrated a legacy PHP monolith to a maintainable MERN stack application (React, Node.js/Express MVC, MongoDB), cutting initial page load times by 30% via code splitting, lazy loading, and organized state management.
- Developed secure authentication using JWT and designed well-structured, reusable MongoDB schemas for maintainable data modeling.

Projects

Foodie-RMS - Multi-vendor restaurant management platform Live Link

React, Node.js, Express.js, MongoDB, Mongoose, Tailwind CSS, NextUI (currently HeroUI)

- Centralized restaurant administration, order processing, inventory tracking, branches, staff management, expenses, and subscription workflows within a single web application.
- Contributed to building reusable dashboard architecture with role-based access, Firebase authentication, Stripe payment integration, media uploads, and reporting.

AirCNC - Full-stack accommodation platform Live Link

React, React-Router, Vite, Express.js, MongoDB Atlas, Firebase, Tailwind CSS

- Built an accommodation platform with a React frontend and Express.js REST backend, backed by MongoDB Atlas, with APIs for users, rooms, and bookings.
- Implemented host workflows for room creation, management, deletion, browsing room details, and booking management, with user profiles.

Education

BSc in Computer Science and Engineering (CSE)
R. P. Shaha University | January 2020 - March 2024

Activities

- Participated in the ICPC Regional Contest 2022.
- R. P. Shaha University Intra-Department Programming Competition ranked 2nd among 22 teams.
- RPSU Coding Competition ranked 8th among 35 contestants.
- North South University Coding Bootcamp contestant.

Courses and Workshops

The Hard Parts of Functional JavaScript by Will Sentance | Frontend Masters

Completed on March 19, 2026

- Studied JavaScript internals, including closures, function composition, higher-order functions, immutability, and function decoration to strengthen my knowledge of JavaScript execution flow to debug complex code logic.
